PRODUCT INFORMATION
S-ADENOSYL-L-METHIONINE

Vesta Ingredients has been a leader in the nutraceuticals industry for over 20 years. The superior quality of Vesta Brand raw ingredients has ensured the success of our clientele.

What is SAME for pets?

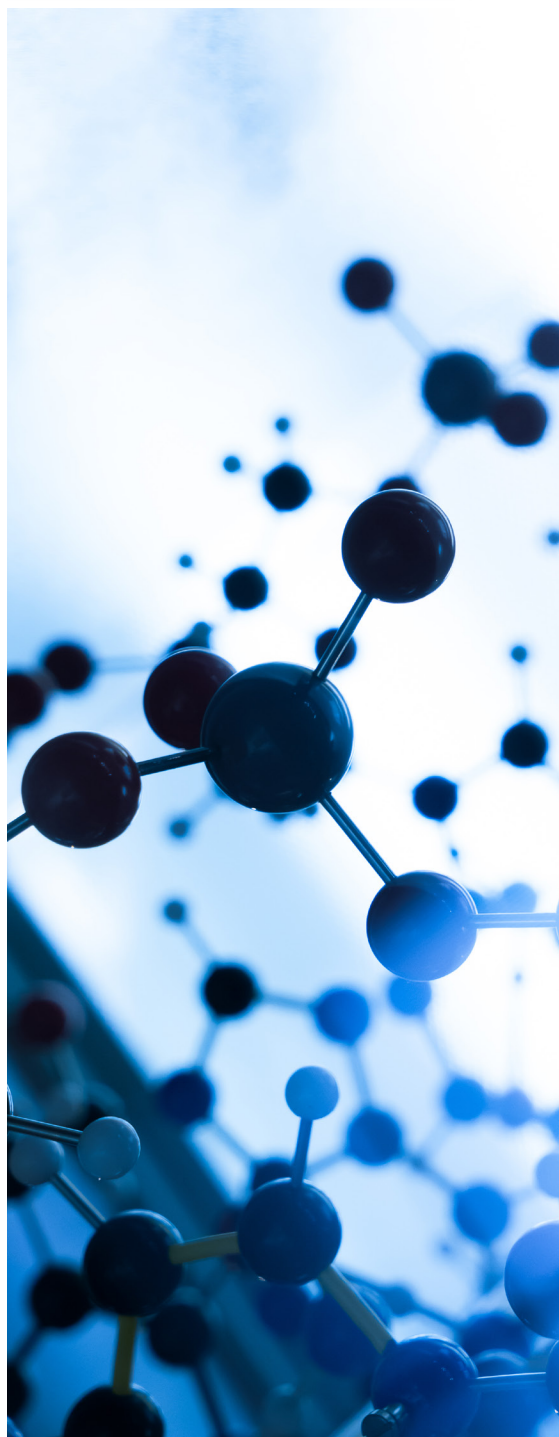

SAME is widely used for comparable purposes in animals as it is used in people, particularly in dogs. Our canine companions have similar issues with metabolic, skeletal, and cognitive health. SAME works with enzymes that support healthy metabolism, connective tissues, and neurotransmitters & hormones. SAME is safe to use with both cats and dogs. Tablets come in 50mg, 100mg, 200mg, 400mg, the different strengths depend on the weight of the animal.

About SAME for pets

SAME is a naturally occurring molecule that helps to relieve a variety of symptoms. Vesta SAME for pets is an important natural supplement because many pets suffer from joint, mood, and digestive issues. SAME is an important natural supplement for pets that may have these issues. SAME is produced naturally in your pet's body, but the levels decline with age. Older pets may benefit from SAME, and SAME for pets is designed to support cognitive, connective tissue, and metabolic health.

What is SAME?

SAME (known as S-adenosylmethionine) is not an herb or a hormone. It's a molecule that all living cells, including our pets, produce constantly. To understand SAME, first, you need to understand methylation and the importance of this process. Methylation is a simple transaction in which one molecule donates a methyl group (four-atom appendage) to a neighboring molecule within our pet's body. SAME's methyl group is composed of one carbon and three hydrogen atom. These transactions have far-reaching effects that affect everything from fetal development to brain function. It regulates the expression of genes, preserves fatty membranes that insulate our pets cells, and helps regulate various hormones including serotonin, melatonin, dopamine, and adrenaline. Without SAME, there would be no methylation.

Why use SAME supplements?

With age SAME levels decline and continue to drop. Once SAME levels start to diminish, difficulties start to arise. These difficulties can be remedied by SAME supplements that are a stable, synthetic replication of the compound. It is neither a drug, herb, vitamin or hormone, but a highly reactive molecule or key cellular nutrient with almost no side effects. After all, one is simply supplementing what is already available in every cell. Since the discovery in 1952, SAME's role in maintaining good health has become more widespread and today is rated amongst the top selling dietary supplements.

Hygroscopic Material

SAME is a hygroscopic material. Hygroscopic material absorbs moisture very easily. Contact with moisture causes these materials to degrade and become "unstable." The capabilities to properly handle, manufacture, and package these materials is vital to the stability and effectiveness of the product.

The Key to Stability

Choose foil blister packs. Plastic material blister packs or bottles have the potential of exposing the product to moisture, depleting the active material. Foil protects them from the air and moisture, both of which will cause the tablets to break down and begin to lose their potency.

Look for enteric coating. Enteric-coated tablets are designed to protect the tablet to allow it to reach the Intestinal tract, instead of breaking down in the stomach. This process can also protect hygroscopic material from moisture exposure.

Choose tablets. When it comes to hygroscopic material, tablets are superior to capsules. Bottled tablets, produced in a tightly controlled environment and enteric-coated, retain potency almost as well as tablets in blister packs.
